

## Public index of geophysical surveys in MAGIX database

MAGIX is a register and repository of geophysical survey datasets held by the Geophysics Section in the Geological Survey of Western Australia (GSWA). Most datasets in MAGIX are from private company airborne surveys registered with the Department of Mines, Industry Regulation and Safety (DMIRS) under the department's Airborne Survey Reporting Policy. The repository also contains some private company ground geophysical datasets, and datasets from surveys commissioned by GSWA and other government agencies. Survey location metadata coordinates are in GDA 94 decimal degrees.
